

		Max value of 1 TD point: \$0.005
--	---	----------------------------------

Value of a TD Point

Each TD rewards point should be worth \$0.005 (\$50/10,000) but your points can be worth less because you need to book in 10,000-point increments.

Example: Redeeming TD points for a \$310 flight

Points Required: 70,000 TD Points (This point amount could be worth \$350 but since you need to redeem in 10,000 point increments you need this amount for a \$310 flight)

Value of your TD Points: $\$310 / 70,000 \text{ Points} = \0.0044

Return on every \$1 Spent: $3 * \$0.0044 = \0.013 (1.3% return)

In this example one TD Point is worth \$0.0044 but since you can earn 3 points for every dollar spent, your return on every \$1 spent is \$0.013 (1.3%).

One of the best features of this program is that you can book travel online with Expedia for TD, receive 9 TD Points for every \$1 spent and then within 90 days redeem points towards that purchase with the Book Any Way option. Essentially, you can earn bonus points on the booked travel and then use those bonus points to receive a full credit for the travel cost.

Example: Redeeming TD points for a \$600 flight purchased on Expedia

Points earned for a \$600 flight: $\$600 * 9 = 5,400$ points

If you then redeem points for this flight within the next 90 days:

New Points Required: $120,000 - 5,400$ (I am subtracting these points as they were earned when booking this flight) = 114,600 TD points.

Value of your TD Points: $\$600 / 114,600 = \0.0052

Return on every \$1 Spent: $3 * \$0.0052 = \0.0156 (1.56% return)

In this example, you can receive a 1.6% return for your TD Points. Due to the bonus points you earn when booking with Expedia for TD online, it may be worth it to always book using this method.
